Product Life Expectancy

UPDATE: MARCH 2022

Leather Based Products

All our leather products are made of full grain leather, where the top surface of the original leather is kept intact to preserve the natural strength of the top layer of the leather.

If a leather-based product is used, taken care of, and maintained as any normal leather product, we expect the following complete lifetime of the product per type:

Phone Cases

A phone case is handled daily in close contact with skin and exposed to moist, skin cream etc., the wear and tear limits the lifespan to expected 5-8 years

iPad Cases

An iPad case is handled on average a few times per day and is in contact with skin and exposed to moist, skin cream etc. The lifespan is expected to be 8-10 years

Laptop Sleeves Cases

A laptop sleeve is handled on average 5-10 times a day and is exposed to pulling out of and inserting into bags etc. This makes it more prone to scratches and a good care of the surface is advised. The lifespan is expected to be 5-8 years

Bags and Backpacks

Bags and backpacks are made of thickest possible full grain leather and is by default more durable than other thinner and slimmer leather-based products. A bag/backpack is handled on average 10-20 times a day and is exposed to different surfaces and external conditions. This makes it more prone to scratches and a good leather care of the surface is advised. The lifespan is expected to be 5-10 years

Recycled Plastic based products

dbramante1928

always forward

In theory only UV-light, extreme heat and chemicals/pollution can degrade any plastic type we use in our recycled plastics line-ups and thereby life expectancy of any of our plastic products, is very high. A cleaning with a damp cloth from time to time is advised.

There is no durability difference between the far more pollution virgin plastics and the recycled plastics we use in our products which places recycled products from dbaramante1928 on par with any other plastic based brand.

Please find the expected lifetime of our products per category below:

Phone Cases

A phone case is handled daily in close contact with skin and exposed to skin cream etc., the wear and tear limits the lifespan to expected 5-8 years

iPad Cases

An iPad case is handled on average a few times per day and is in contact with skin and exposed to skin cream etc. The lifespan is expected to be 8-10 years

Laptop Sleeves Cases

A laptop sleeve is handled on average 5-10 times a day and is exposed to pulling out of and inserting into bags etc. This makes it more prone to scratches of the surface, where the threading over time might be exposed. Wiping the surface from time to time with a damp cloth is advised. The lifespan is expected to be 5-8 years

Bags and Backpacks

Bags and backpacks are made of very durable weaving techniques thickest possible full grain leather and is by default more durable than other thinner and slimmer plastic-based products.
